
Screening: no inferential claim
Prompt units
A: screen scores
Attribution / activation screen
Screened family $S(A)$
Ordinary shortcut score threshold / manual k
no FDR target, no CI
condition on $S(A)$
Inference: FDR-controlled
B: test fresh
Selection-free $\hat{\tau}$ + 95% CI
p-to-e + e-BH auto count at q
C: held out joint circuit eval
$D_{if} = m(x_i) - m_f^{abl}(x_i)$
$e(p) = (1-\gamma)p^{-\gamma}$
$\gamma = 0.5,\ q = 0.1$
